## Aves Cantábricas (Cantabria's Birds) not to miss any detail

Discover in depth the ornithological richness of the region with the nature tourism activities that Aves Cantábricas proposes

**Las aves como no** Birds as you've never seen them. Ornithological tourism in Cantabria involves experiencing the proposals of Aves Cantábricas, a business initiative that gives value the natural resources of the region through formation, interpretation and investigation activities, with the conservation of the natural environment as main objective.

One of the star services of this company is the aquatic bird's observation in the marvelous spot

named Marismas de Santoña. The best way to discover it: a guided boat ride during the low tide period. With departures in Santoña or in Colindres, the visitor shall

board in a ride of two hours and a quarter of duration with a professional who shall guide you in the identification of birds and a first quality telescope to facilitate the sighting. Enjoy the first lights of the daybreak onboard while tasting a warm drink is a pleasure that the ornithological tourist can't miss. The short size of the group, from 4 to 6 persons, guarantees the exclusivity of the service. Who prefers to step on solid land can visit one of the six Protected

Natural Spaces of the region: the National Park of Picos de Europa and five Natural Parks; Oyambre, Saja-Besaya, Dunas de Liencres, Collados del Asón and Marismas de Santoña, Victoria y Joyel. Aves Cantábricas offers routes guided

by route specialists in routes of half journey (4 hours) or complete journey (8 hours) to visit the most spectacular corners of these places. You can choose between organized routes or custom-made routes. Bigger groups than 10 persons shall also benefit from special offers.

But if it has to be with personalization, we cannot miss the chance of programming an observation route for the chosen bird species. Alpines, picids, raptors... the visit is established as the consumer wants, who is accompanied in the transfers between the different zones. The duration of this service is 8 hours and the birds shall be observed with prismatic and telescopes. This service is offered to minimal groups of 4 persons. Beyond land and marine birdwatching, it is possible to walk ravines and cliffs that take your breath away, listening the bellowing of deers and observing the costumes of the Spanish ibex... The wild and rough landscape of Cantabria shall not cause indifference to anyone, whichever he/she likes.

**AQUATIC BIRDS**  
One of the star services of this company is the bird observation in the natural spaces, wetlands and ZEPAS of Cantabria.
